GELEN

COMPANY PROFILE · 2026

A large-scale industrial scene at a quarry or mining site. In the foreground and middle ground, there are several large, grey, boxy machines with red railings and ladders, connected by a network of inclined conveyor belts. A yellow crane is visible on the right side, lifting a component. The background shows a deep, terraced quarry pit with some vegetation on the left side. The overall atmosphere is industrial and powerful.

ENGINEERED IN ANKARA. RUNNING ON FIVE CONTINENTS.

EXPORT GROWTH IN FIVE YEARS

We design, build, install and service the machines that turn rock into the aggregate that roads, bridges, airports and cities are made of. One company, the whole plant — from the first drawing to the last spare part.

— WHO WE ARE

ONE COMPANY. THE WHOLE PLANT.

GELEN designs, manufactures, installs and services crushing, screening, washing and material-handling equipment for the aggregate, mining and recycling industries. The company was founded in Ankara in 1981 and has built every machine it sells at its own works in the ASO 1. Organised Industrial Zone since 1997.

Engineering, fabrication, heat treatment, machining, assembly, electrical wiring and commissioning are all done in-house. That is what lets us hold the same tolerances on a 40-tonne jaw crusher as on a screen exciter, and answer a site problem with a redesigned part rather than a generic one.

From a single machine to a complete 1,000 t/h plant, the promise is the same: it runs, it keeps running, and when it needs a part, the part is there.

AT A GLANCE

Head office & works	ASO 1. OSB, Ankara, Türkiye
Established	1981
Closed production area	12,500 m ²
People	100

Management systems	ISO 9001 · ISO 14001 · ISO 45001

SINCE 1981

1981

WHERE IT STARTED

GELEN was founded in Ankara in 1981, in a country that was building roads, dams and cities faster than it could buy the machines to crush the rock for them. The first plants left a small workshop for the highway sites of Anatolia, painted the orange of the era and built to be repaired in the field with what a crew had on the truck.

Within a decade the workshop had become a factory, and the factory had a habit: building the machine the market did not yet have. The first base-course mixing plant made in Türkiye. The first new-generation impact crushers — secondary, tertiary and then primary. The first horizontal screen. Each one designed for a named project, proven on it, then sold across the country.

A RECORD OF FIRSTS.

FIRST IN TÜRKİYE

1981

GELEN is founded in Ankara

Machines for mining, road and construction contractors.

1988

Base-course mixing plant

Ankara-İstanbul highway construction project.

1994

New-generation secondary impact crusher

Bayındır Construction, Kavacık-Beykoz highway.

1996

New-generation tertiary impact crusher

Karabük Iron & Steel Works.

1997

New-generation primary impact crusher

İskay Construction, Kütahya road project. The works move to ASO 1. OSB.

1998

Joint-stock company

GELEN Makina A.Ş.

2004

Horizontal screen

İskay Construction Company.

2014

Yavuz Sultan Selim Bridge

600-650 t/h plant for the third Bosphorus crossing.

2016

İstanbul Grand Airport

500-550 t/h plant, and the first high-speed tertiary crusher.

2022

North America operations

Engineering partnership and sales presence in the United States.

2024

Export award

Ankara Chamber of Industry, 15th export ceremony.

2025

Every machine gets a serial and a QR

Spares, manuals and service history one scan away.

Cone crusher assembly in the old workshop

Radial stackers at a quarry in central Anatolia, 1980s

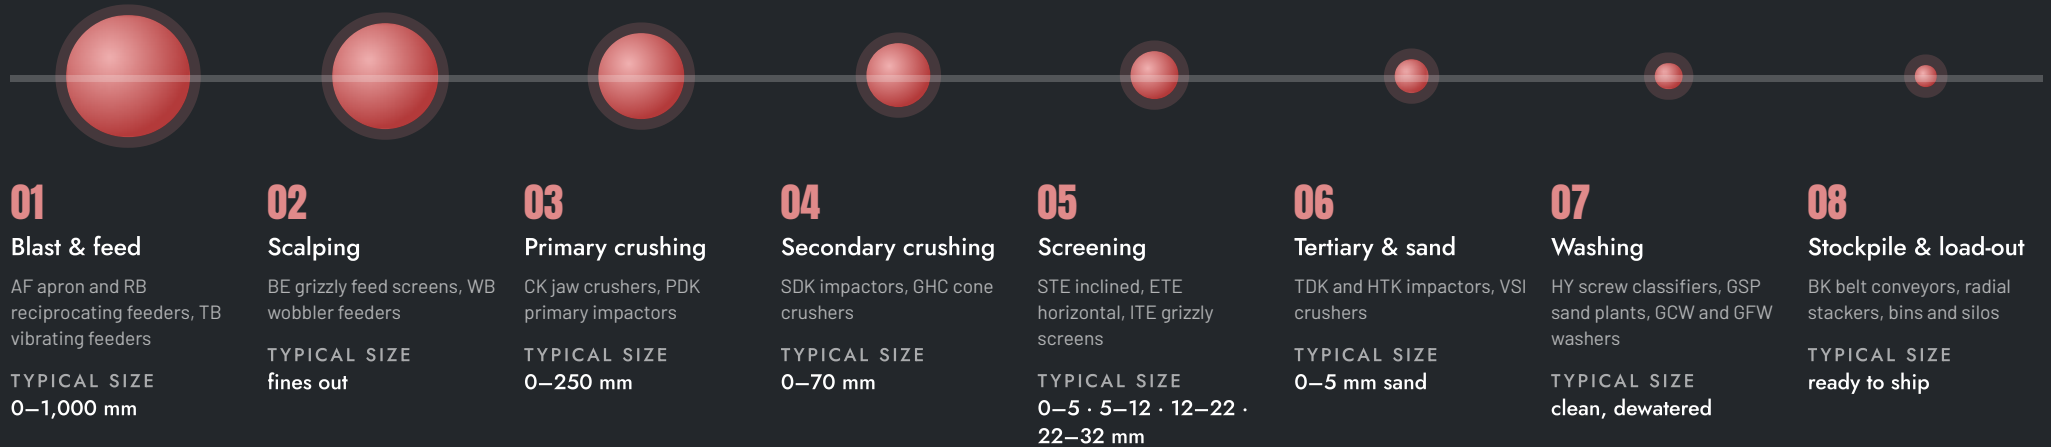

The base-course mixing plant, Ankara–Istanbul highway, 1988

The works in the 1990s

THE JOURNEY OF A ROCK.

Every GELEN machine has a place on this line. A small quarry uses five of the eight stations; an 800 t/h aggregate plant uses all of them, some of them twice.

EVERY MACHINE BETWEEN THE BLAST AND THE STOCKPILE.

Jaw crushers

CK series primary and secondary jaw crushers, 340 to 1,200 mm feed.

Impact crushers

PDK primary, SDK secondary, TDK tertiary and HTK high-speed rotors.

VSI crushers

Rock-on-rock vertical shaft impactors for cubical sand.

Cone crushers

GHC hydraulic cone crushers for hard, abrasive rock.

Vibrating screens

Inclined, grizzly, elliptical horizontal and fine-sand screens.

Feeders

Vibrating, grizzly, wobbler, reciprocating and apron feeders.

Washing & classification

Screw classifiers, sand plants, log washers, blade mills, hydrosand.

Continuous mixers

MP series twin-shaft mixing plants for base course and stabilised soil.

Material handling

Belt conveyors, radial stackers, bins and silos.

Mobile units

Wheeled crushing and screening plants on road-legal chassis.

Automation

Plant control, remote monitoring and production reporting.

PRODUCTS CATALOGUE —
GELENMAKINA.COM/CATALOGUE

— COMPLETE PLANTS

FROM 100 TO 1,000 T/H. STATIONARY OR ON WHEELS.

A GELEN plant is designed as one machine. Feed, crushing stages, screening, washing, conveying and control are sized together from the feed material and the product spec — then built, installed and commissioned by the same people.

TYPICAL CONFIGURATIONS

100 T/H		2 STAGES
250 T/H		2 STAGES

→ SERVICE

TWENTY-SIX COUNTRIES. FIVE CONTINENTS.

GELEN plants run from the quarries of Anatolia to the basalt pits of the Caucasus, the limestone of southern Poland and the aggregate yards of Nevada. Every one of them was built in Ankara, and every one of them can call it home.

EXPORT

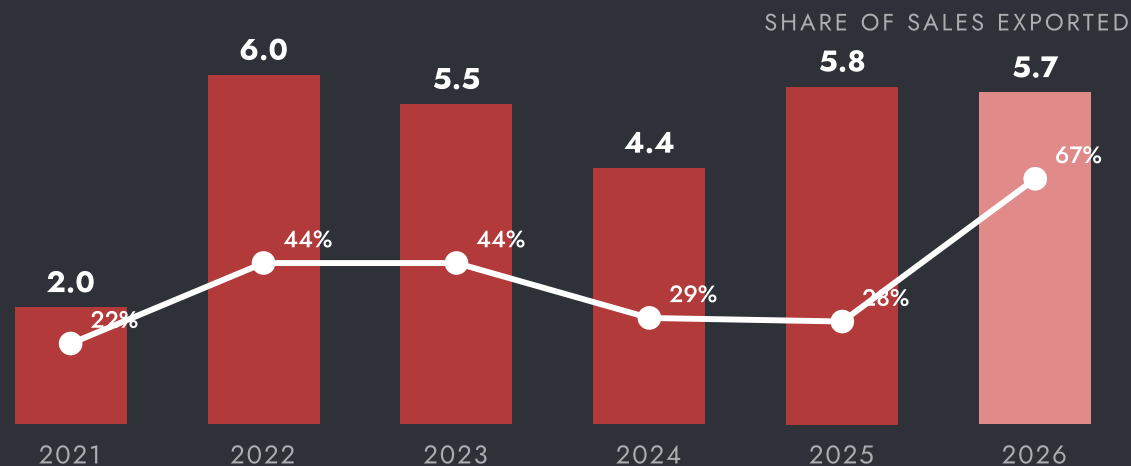

×2.8

SINCE 2021

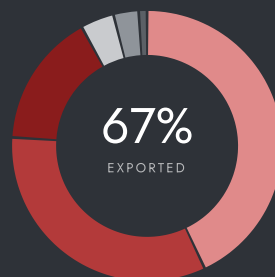

From a fifth of the business to two thirds of it.

A dealer network from Poland to Nevada, and a product line built for the toughest feed, took exports from a fifth of sales in 2021 to two thirds of them in 2026. Plant orders are lumpy by nature – one 450 t/h plant is a year of spares – so the line matters more than any single bar.

— WHY ANKARA

THREE HOURS FROM ANYWHERE THAT BUILDS.

Ankara sits between Europe, the Gulf, Central Asia and Africa, in the country that has become the region's machinery works. A GELEN engineer is on a site in Warsaw or Riyadh the same day, and a machine is on a truck to Poland or a ship at Mersin within a week of leaving the paint line.

PORT OF MERSIN

5^h

5 hours by road from the works. Weekly container and RoRo sailings to the Mediterranean, North Africa, the Gulf and the Americas.

EU–TÜRKİYE CUSTOMS UNION

0%

Industrial goods move between Türkiye and the European Union without customs duty. A GELEN machine arrives in Poland, France or Germany CE-marked and duty-free.

TÜRKİYE'S MACHINERY SECTOR

28.7^{bn} \$

28.7 billion USD of machinery exported in 2025, from a sector that supplies quarries on five continents. GELEN's own exports have grown ×2.8 since 2021.

FLIGHT TIME FROM ANKARA

HOW WE BUILD

EVERYTHING UNDER ONE ROOF.

Steel comes in as plate and leaves as a crusher. Every process that decides whether a machine lasts — cutting, welding, stress relief, machining, assembly, wiring, testing — happens on one site in Ankara.

FROM PLATE TO PLANT

- 01 Engineering & 3D design
- 02 CNC plasma cutting
- 03 Welding & fabrication
- 04 Heat treatment

CENTRES

4^h

RUN-IN TEST, EVERY
MACHINE

Every machine leaves after a documented mechanical run-in, a no-load test at operating speed and a final inspection filed against its serial number.

DESIGNED WITH DATA. PROVEN ON SITE.

R&D at GELEN is not a department; it is how every product is made — designed in 3D, checked with structural and flow simulation, prototyped in the works and optimised against data from running plants.

01

Efficiency

Higher capacity per kilowatt, from chamber geometry to drive selection.

02

Durability

Wear parts and frames designed for the hardest feed, not the average one.

03

Automation

Smart controls that keep a plant at its set point without an operator watching it.

04

Serviceability

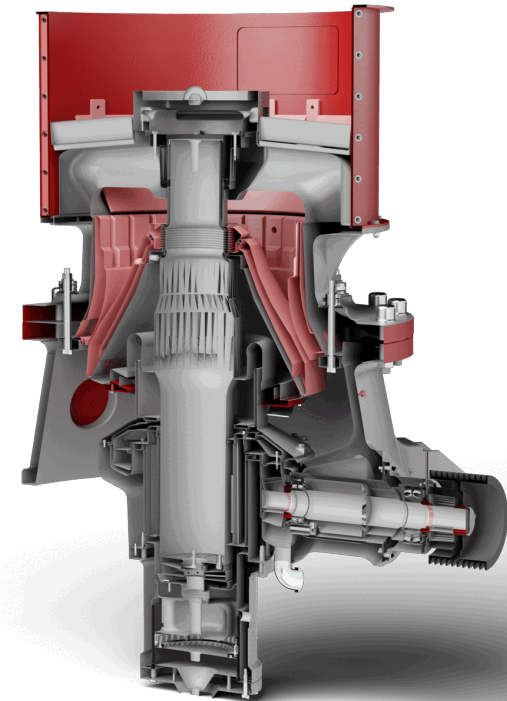

Fast setup, easy maintenance access and parts that swap without a crane.

UNIVERSITY COLLABORATION

Joint research programmes with Ankara universities on wear materials, screening dynamics and data-driven plant control.

REMOTE MONITORING

Production data, alarms and performance analytics from every connected plant, with 24/7 support from the works.

GEC cone crusher — hydraulic setting and overload release, cut away.

EVERY MACHINE HAS A SERIAL. EVERY SERIAL HAS A QR.

Since 2025 each GELEN machine leaves the works with a serial number and a QR code on its nameplate. Scan it and the machine's own page opens: its parts list, its manuals, its service history — and a spares order in one tap.

01

Scan

Any phone, no app. The QR resolves to the machine's own page.

02

See

Exploded parts drawings, part numbers, manuals and the service log — for this exact machine.

03

Order

Tick the parts, confirm the address. The works picks stocked spares within 48 hours.

48^h

DISPATCH OF STOCKED SPARES

2,000⁺

SPARE-PART LINES IN STOCK

24^h

REMOTE MONITORING & SUPPORT

CHEAPER PER TONNE. NOT JUST PER MACHINE.

The price of a crusher is a small part of what it costs to run for five years. Energy, wear parts, downtime and spares are the rest — and every one of them is a design decision taken at the works.

01

Energy per tonne

Chamber geometry and drive sizing matched to the feed, not oversized for the brochure.

02

Wear-part life

Jaw plates and blow bars in GELEN's own alloys, cast for the material on site.

03

Plant availability

Access doors, hydraulic setting and stocked spares keep stops short.

04

Spare-part price

Parts from the works, priced from the works — no importer in between.

What a plant costs to run is decided long before the invoice — in the chamber, the alloy, the access door and the parts shelf.

BUILT FOR FIVE INDUSTRIES.

01

Aggregates

Quarries and sand-and-gravel pits producing for concrete, asphalt and base course.

02

Mining

Ore and industrial mineral crushing and screening, from primary to fines.

03

Infrastructure

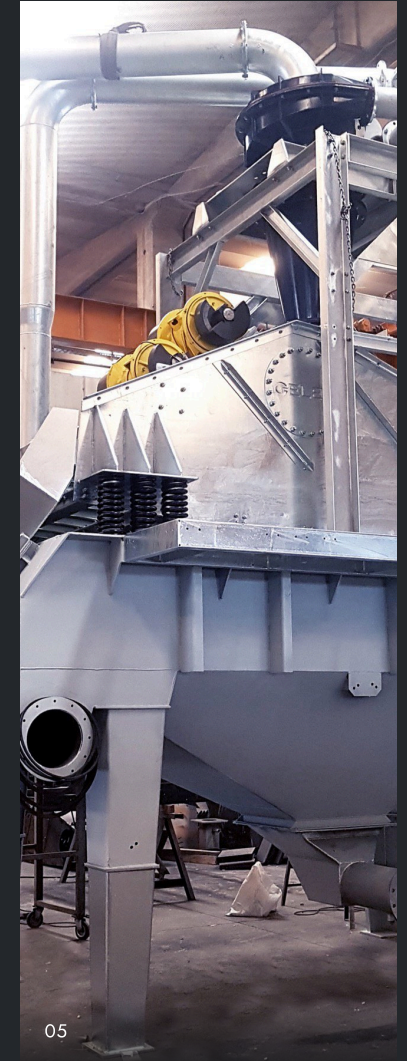

Site plants for highways, dams, airports and bridges — sized to the contract.

04

Recycling & demolition

Concrete and asphalt recycling with wheeled and semi-mobile units.

05

Industrial minerals

Washing and classification for silica sand, limestone and feldspar.

THE PLANT KEEPS RUNNING.

Field service

24

FIELD ENGINEERS ON CALL

Installation, commissioning, inspection and repair, on site anywhere we sell.

Spare parts
